

Roland U-110 — Sound Check waveform (wave-ROM sample 212)

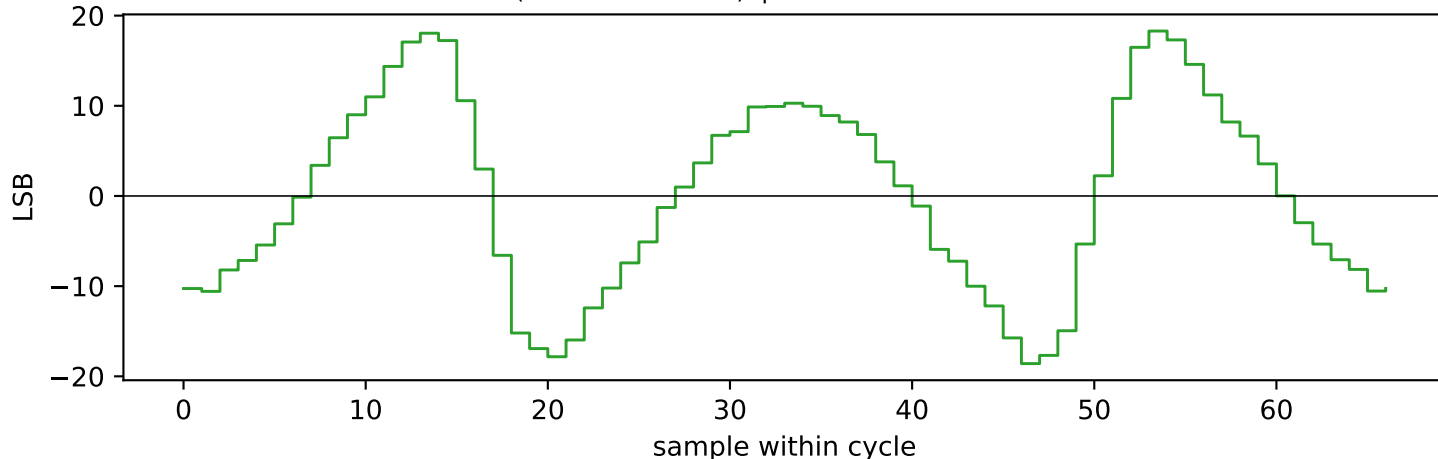

Complete sample: 272 bytes at 0x7ECB1 in waverom3, loop 268 = 4 cycles of 67

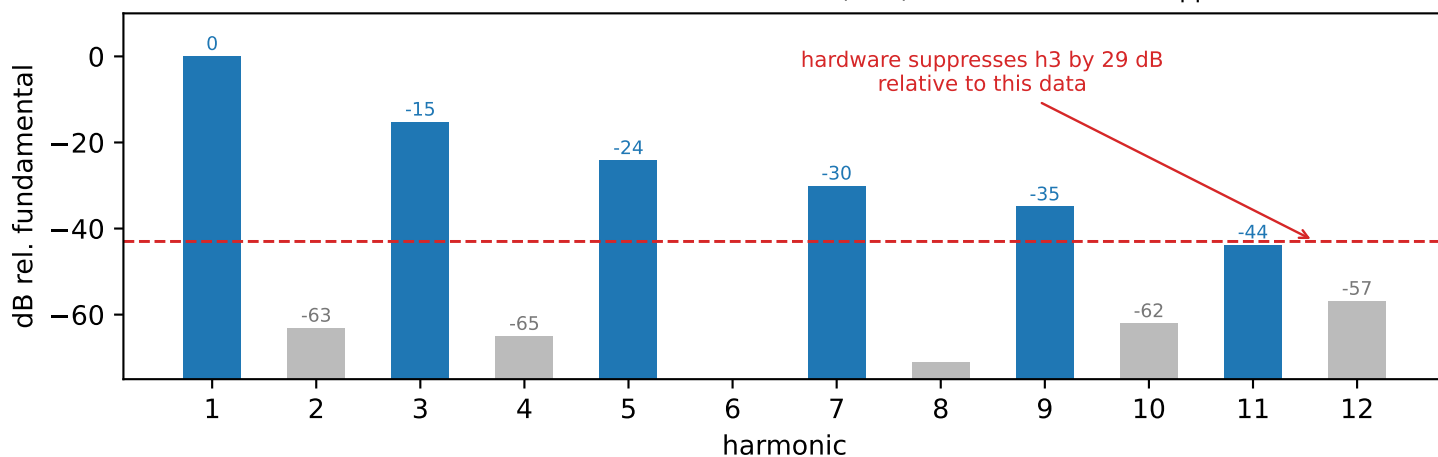

One cycle — the flat top and straight flanks are the whole point

Residual (ROM – fitted sine): peaks near ± 19 LSB at the flanks

Harmonics of the ROM data — odd harmonics (blue) are what hardware suppresses

sine correlation 0.9828 · slope up to 17 LSB/sample · hardware emits a near-pure sine from this data
